Challenges and Benefits

Challenges:

- Need for integration
- Complexity

Benefits:

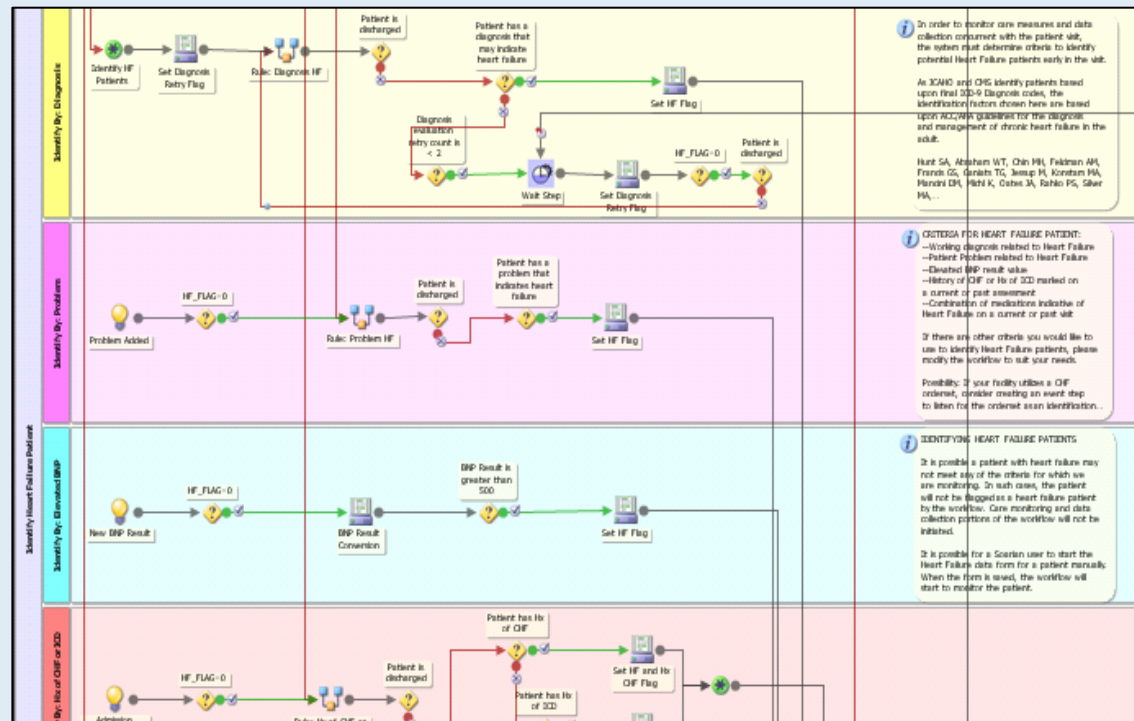

- Dynamic, Configurable
- Disease Management as “byproduct” of care, not as separate activity

Challenge: Need for Integration

- For Process Management tools to be effective, they need to be integrated with
 - 7 Users
 - 7 Data
 - 7 Patients
 - 7 Context

Challenge: Complexity

- Process Management is complex
- Exception Handling adds complexity – undesirable but sometimes unavoidable
- Process Management is not simple, not inexpensive

Benefits: Dynamic, Configurable

- In a Workflow Engine, processes are dynamic and configurable
 - 7 Between diseases
 - 7 Between organizations
 - 7 Over Time
- Continuous Quality Improvement

Benefits: Disease Management as “byproduct”

- Disease Management is a “byproduct” of healthcare delivery – not a separate activity.
- DM Processes tightly integrated into the overall workflow
- DM interventions delivered by the standard healthcare team – physicians, nurses, and others
- DM staff as supplementary team members, and escalation points

Conclusions

- Workflow Management Systems as emerging technology in Healthcare IT
- Process Management techniques and tools help automate Disease Management processes
- Challenges and obstacles exist, but in certain targeted areas, benefits are becoming clear and form the basis for ongoing implementation
