The Emergence & Differentiation of eHealth Plans

- **The Health Care Environment**
 - **Consumerism & Technology Accelerate Emergence of eHealth Plans**
 - **The Evolution of 1st Generation Web Enabled eHealth Plans and 2nd Generation “Digital” eHealth Plans**
 - **eHealth Plan Architecture**
 - **Developmental Pathways**
- **1ST Generation “Wed Enabled” eHealth Plans**
 - **Portal Connectivity**
 - **“Front End” Applications**
- **2ND Generation “Digital” eHealth Plans**
 - **Integrated “Front & Back End” Function Integration**
 - **Difference to Consumer**
 - **Consumer Centric Care Model**
 - **Data Warehouse Drives Functionality**
- **Conclusion**
 - **Sate of the Industry**

The Health Care Environment

Converging Forces Accelerate Emergence of the eHealth Plans

Current Health Plan Model

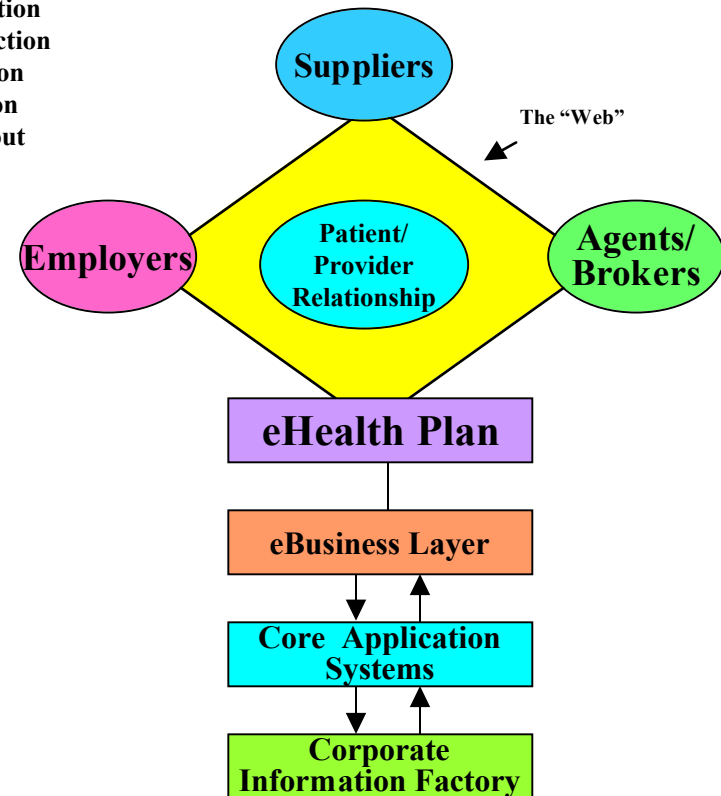

Health Plan Centric

- Consumer Dissatisfaction
 - Regulatory Dissatisfaction
 - Provider Dissatisfaction
 - Investor Dissatisfaction
- will push the insurer out of the center...

...but, technology (the internet) will create a new role for the "eHealth Plan".

eHealth Plan Model

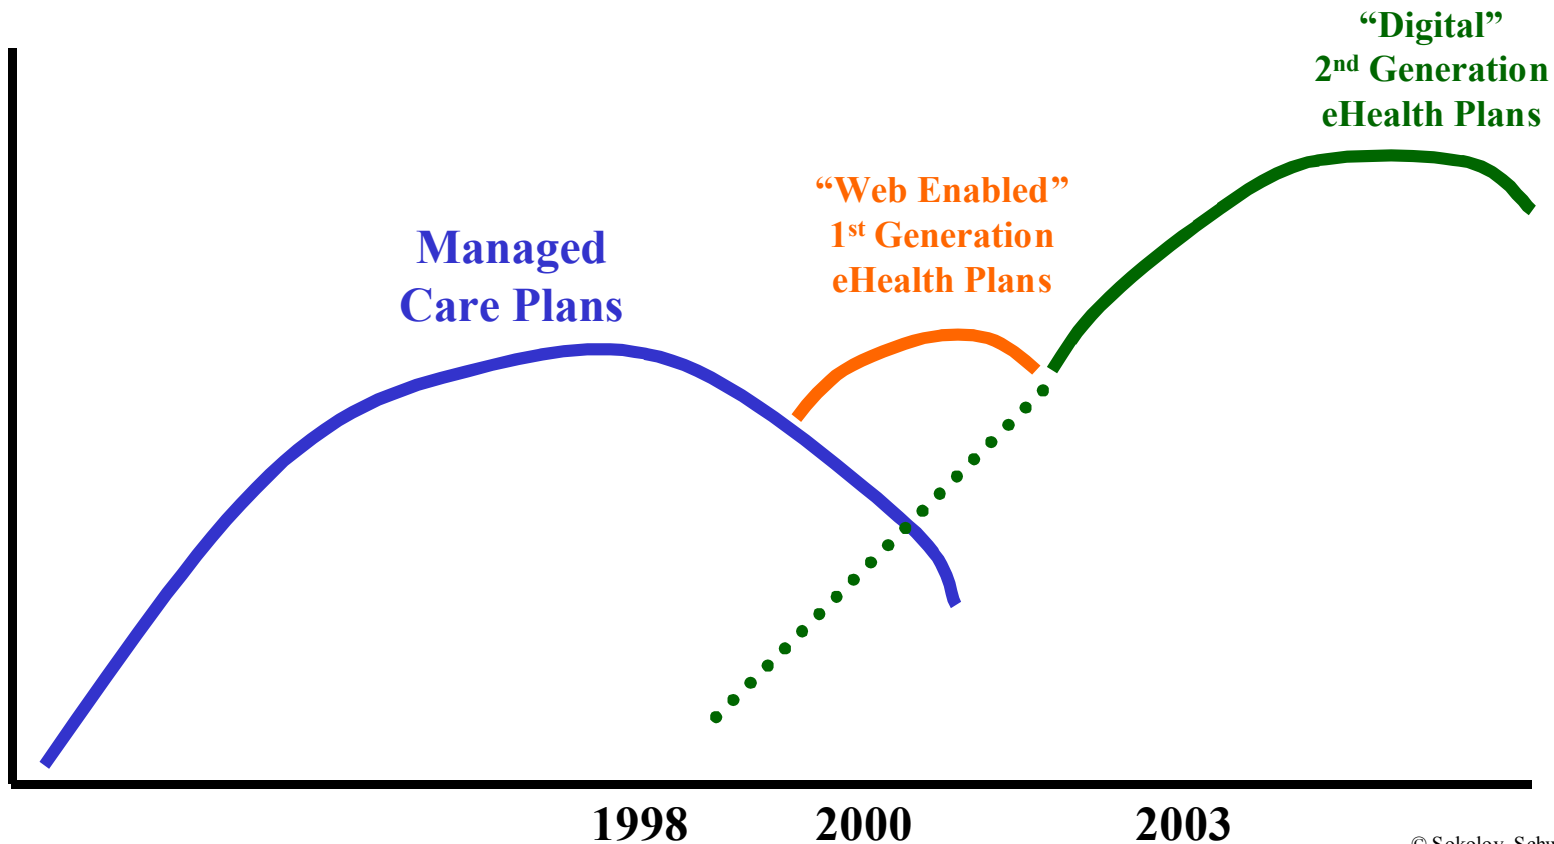

Patient/Provider Centric

The Health Care Environment

Two Internet Approaches to Providing Health Coverage

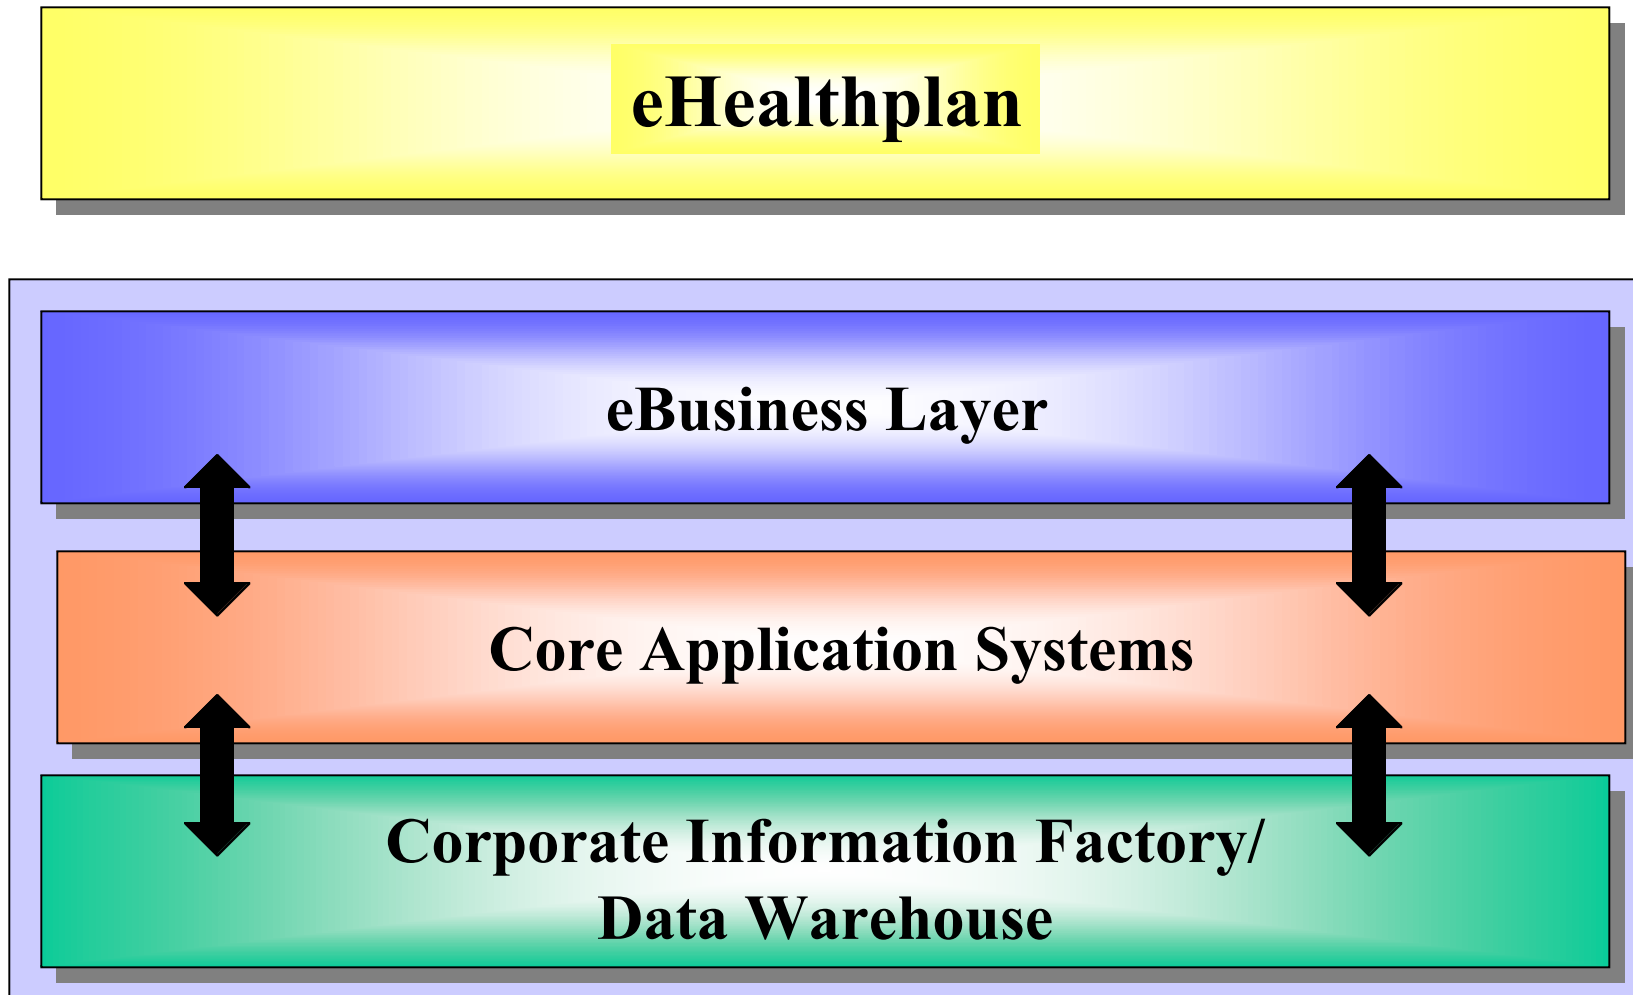

1st Generation – “Web Enabled” eHealth Plans: Using information, automation & the Internet to create the most efficient, convenient, best value health insurance company – eHumana, eUnited, eOxford, eAetna, etc.

2nd Generation – Digital Health Plans: Reinventing the methods & relationships of health management, through “real time” shared information that empowers its constituents – *Emphesys* Digital Health Plan, eHealthDirect, etc.

The Health Care Environment

eHealth Plan Architecture

The Health Care Environment

eHealth Plan Transition: “Digital” Health Plans

The Transition to “Digital” Health Plans will be Accomplished in Phases.

Present

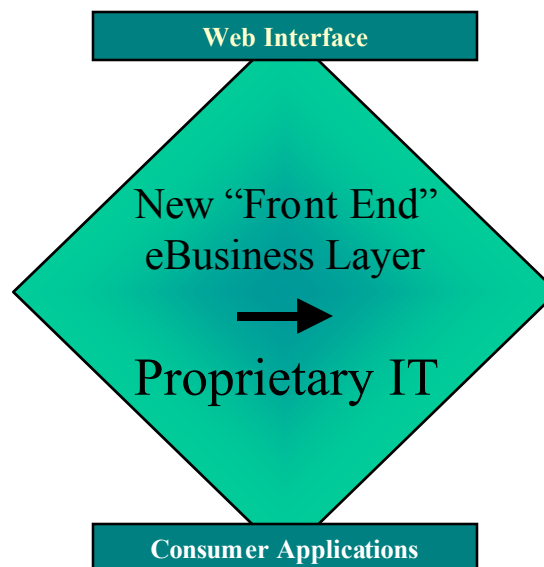

Admin. Ratio = 15%

- Legacy Systems & Databases
- Task Workers
- No Self-Service

1st Generation

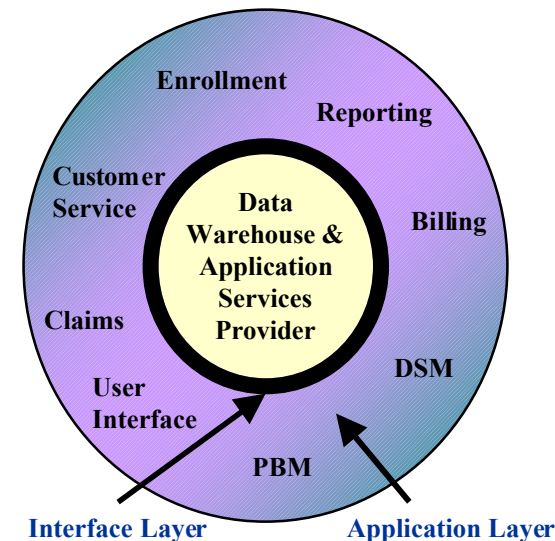

Admin. Ratio = 12%
9-18 Months

- Legacy Systems & Databases
- Appended “Front End”
Web Interfaces
- Some Self-service

2nd Generation

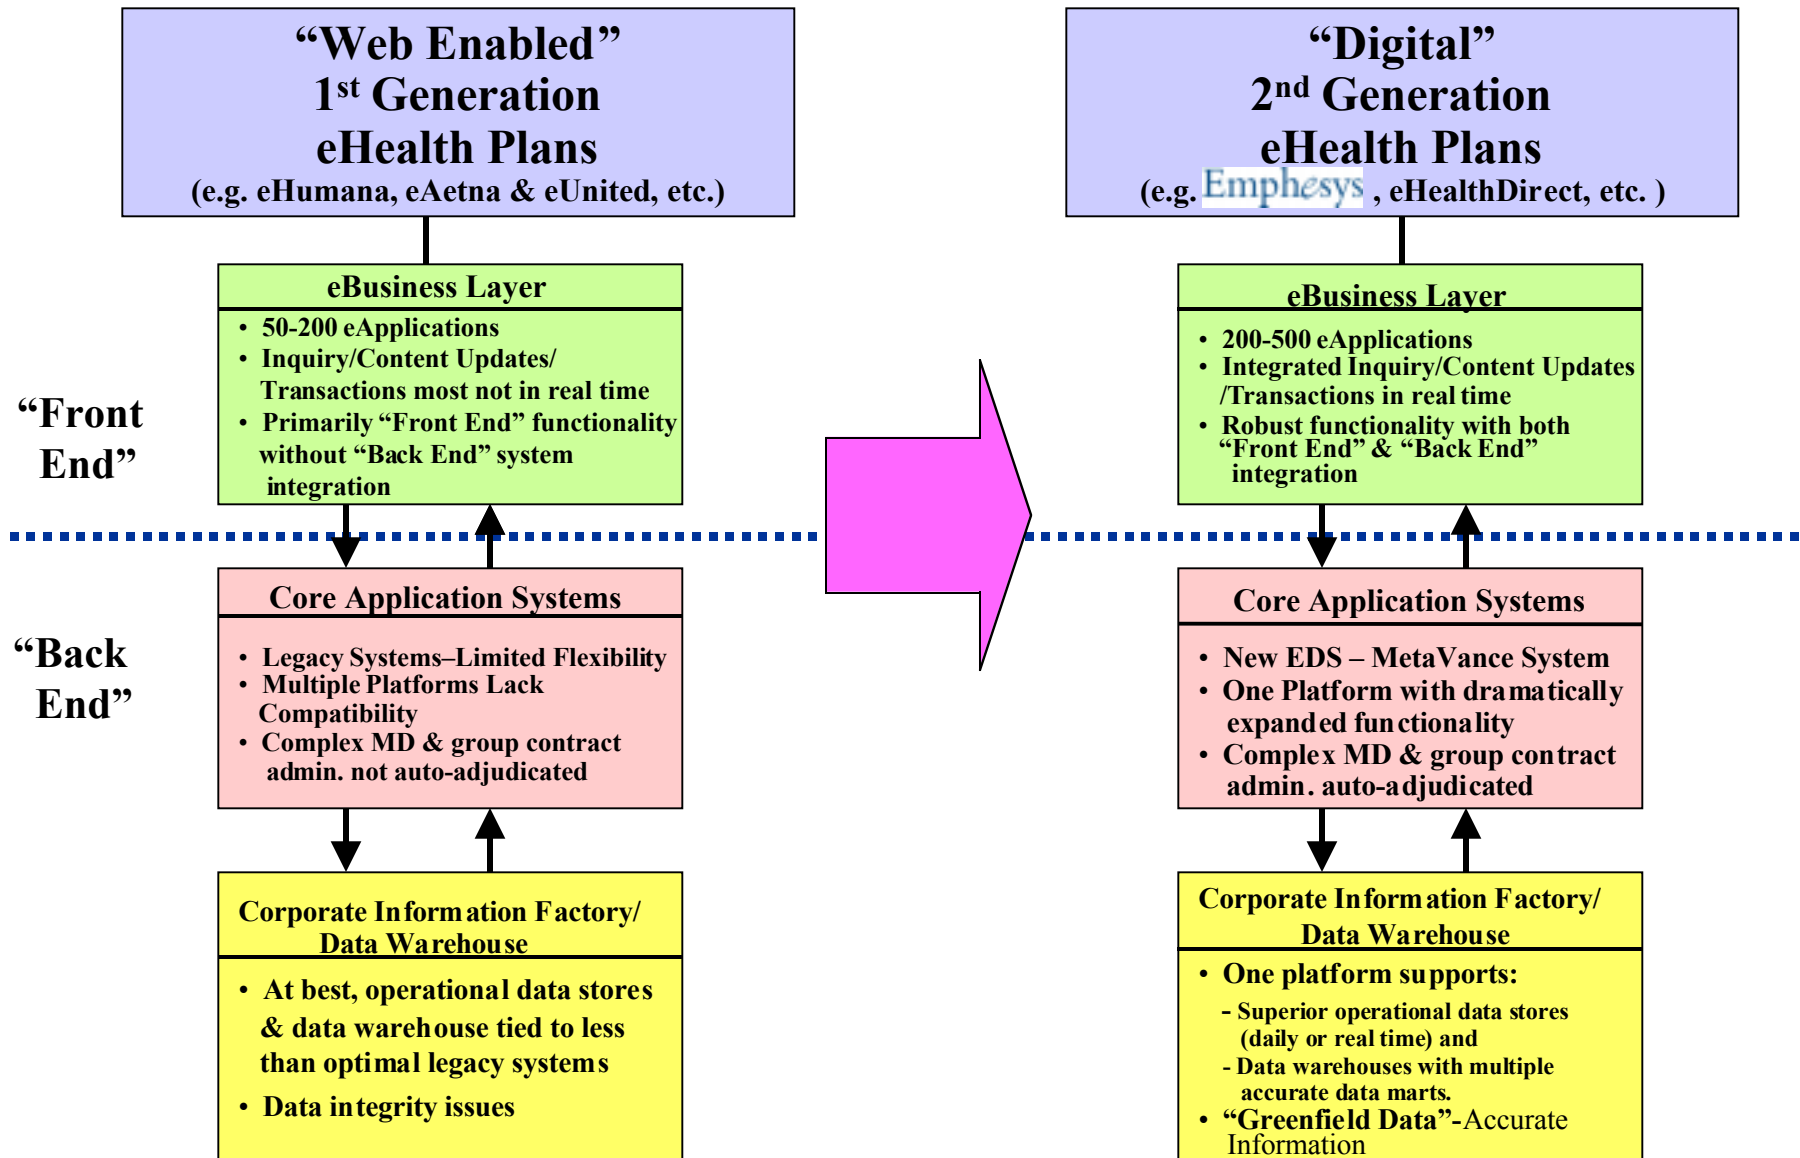

Admin. Ratio = 8%
18-36 Months

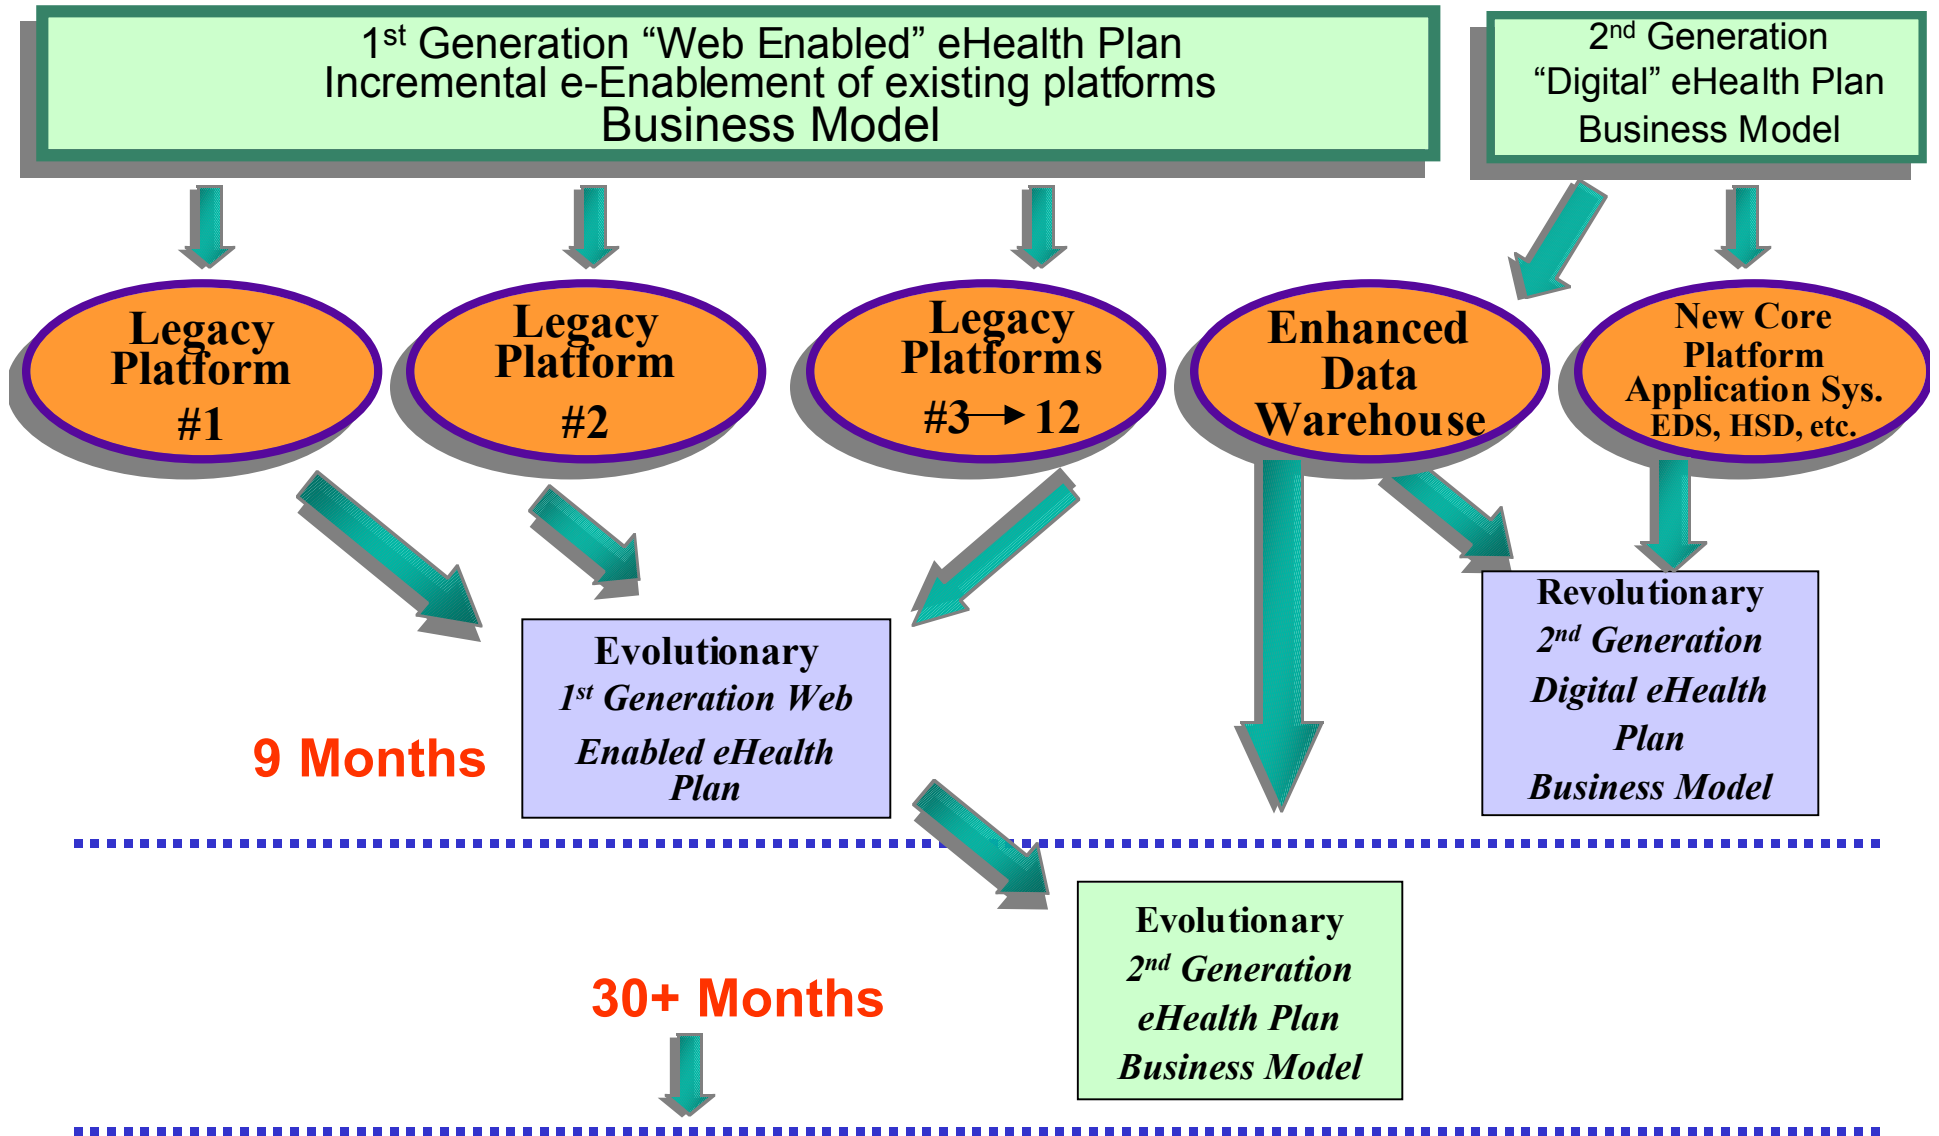

- Digital Core Enables Real-time Transaction Processing for Customers/Managers/Providers
- Large “Self-Service” Potential

The Health Care Environment

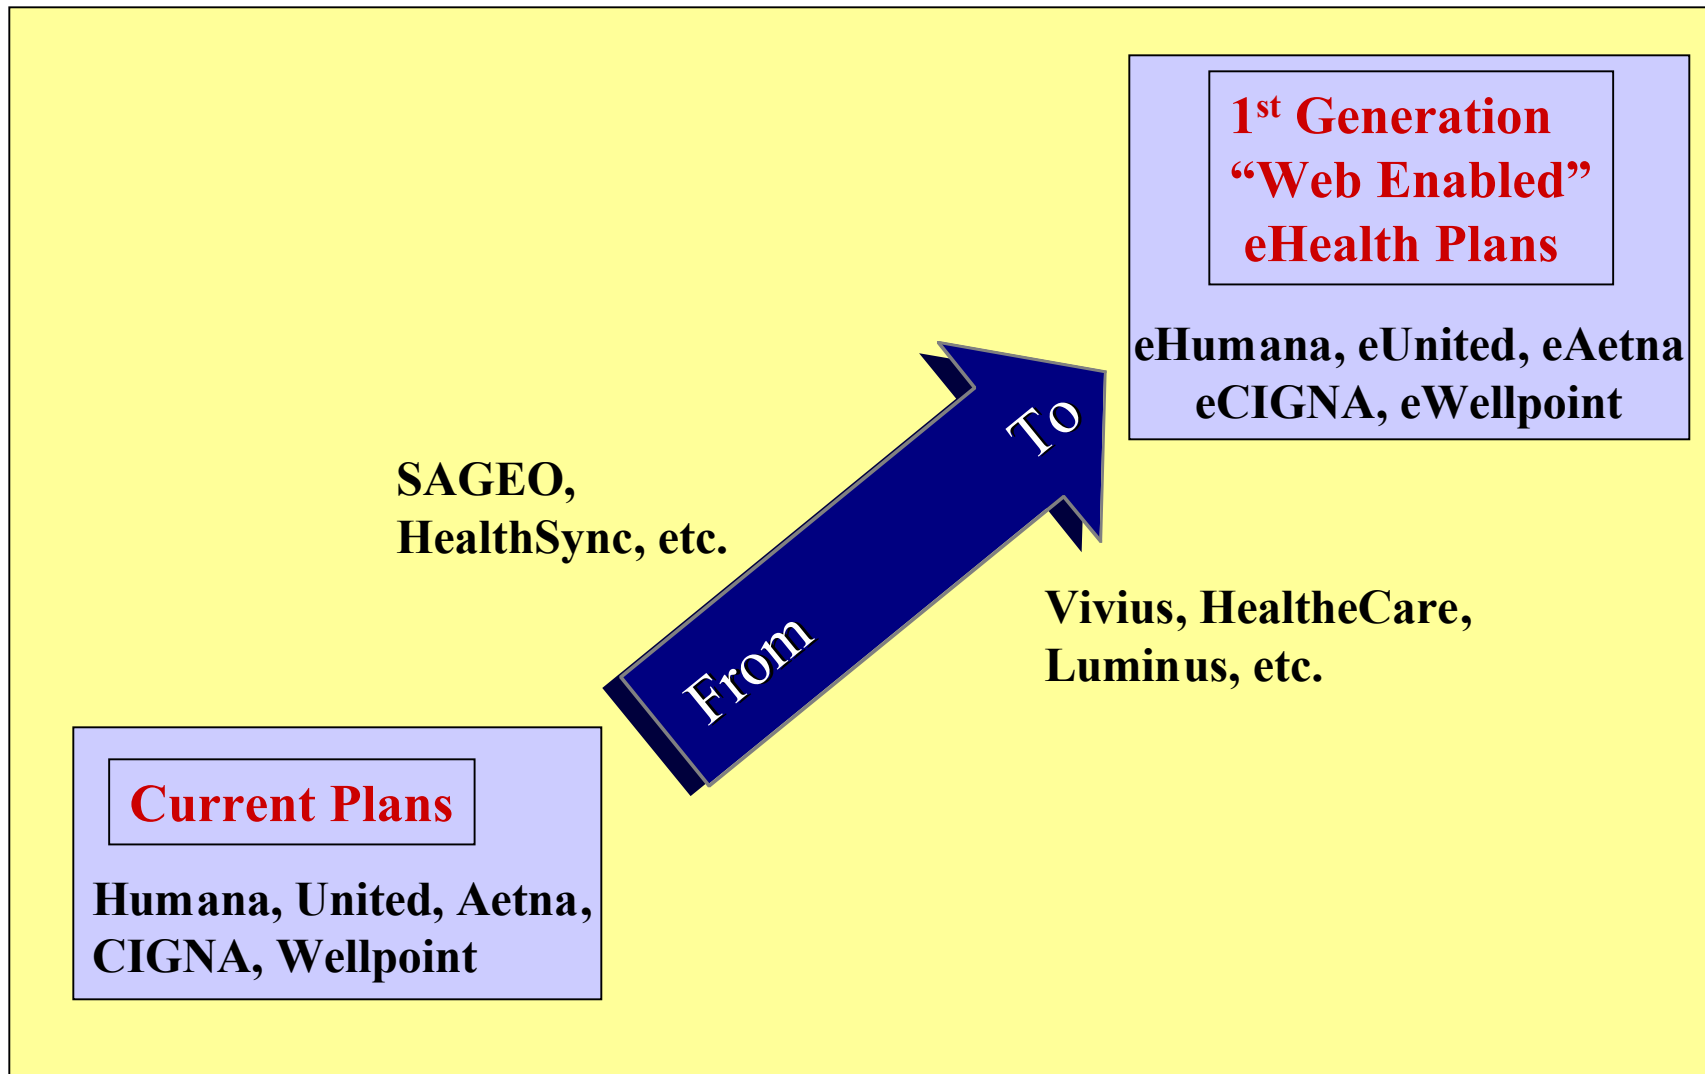

Two Evolving Types of eHealth Plans

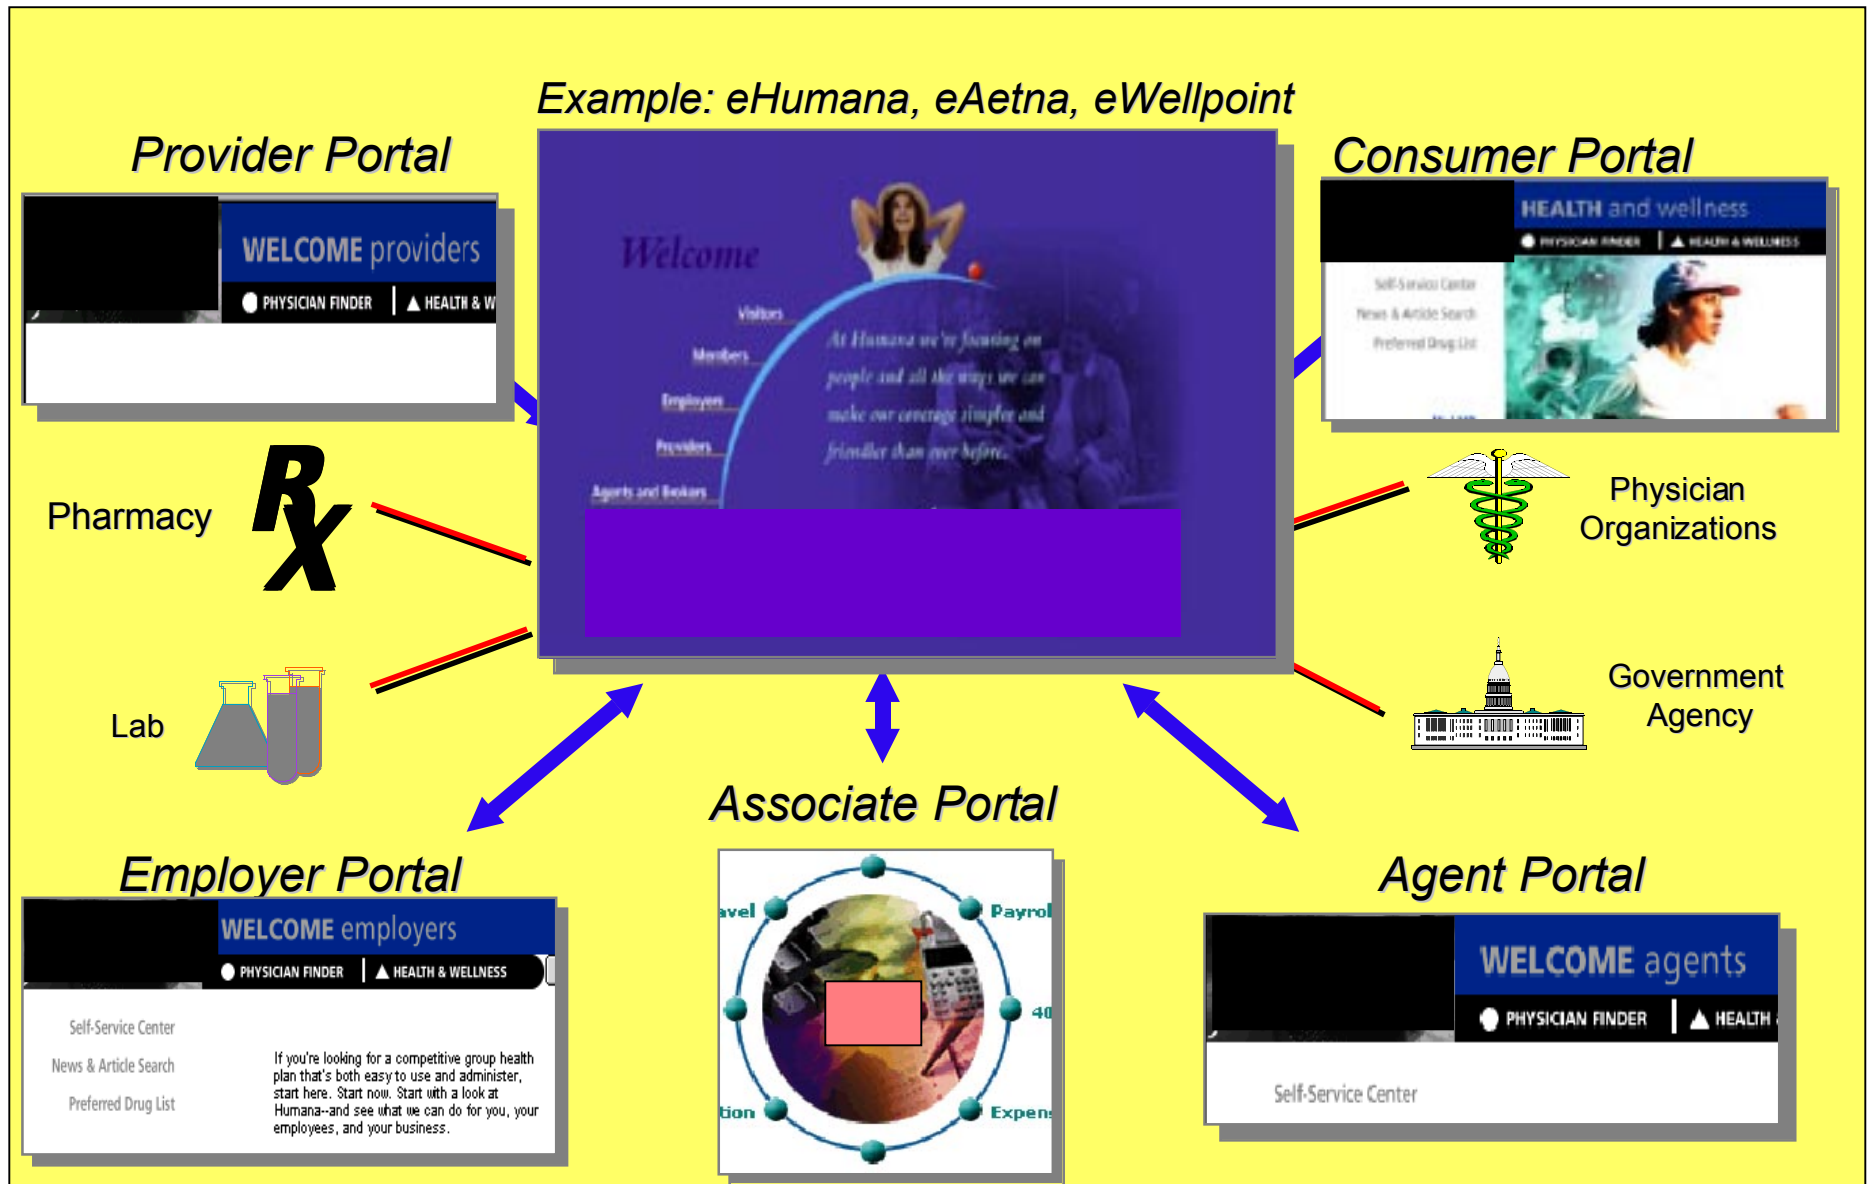

The Health Care Environment eHealth Plan Parallel Paths

The Health Care Environment Transition in Process

1st Generation “Web Enabled” eHealth Plans Connecting “Five” Different Users (Portals)

1st Generation “Web Enabled” eHealth Plans

Provide Members, Employers & Providers Internet Access To:

- **Certificate of Coverage/Summary Plan Document**
- **Provider Directory**
- **Automated Claims Adjudication**
- **Claims Status**
- **Binding Eligibility Determination**
- **Claims History**
- **Formulary Coverage**
- **Health Risk Assessments**
- **Preventive Care – Reminders and Information**
- **High Quality Health Information**

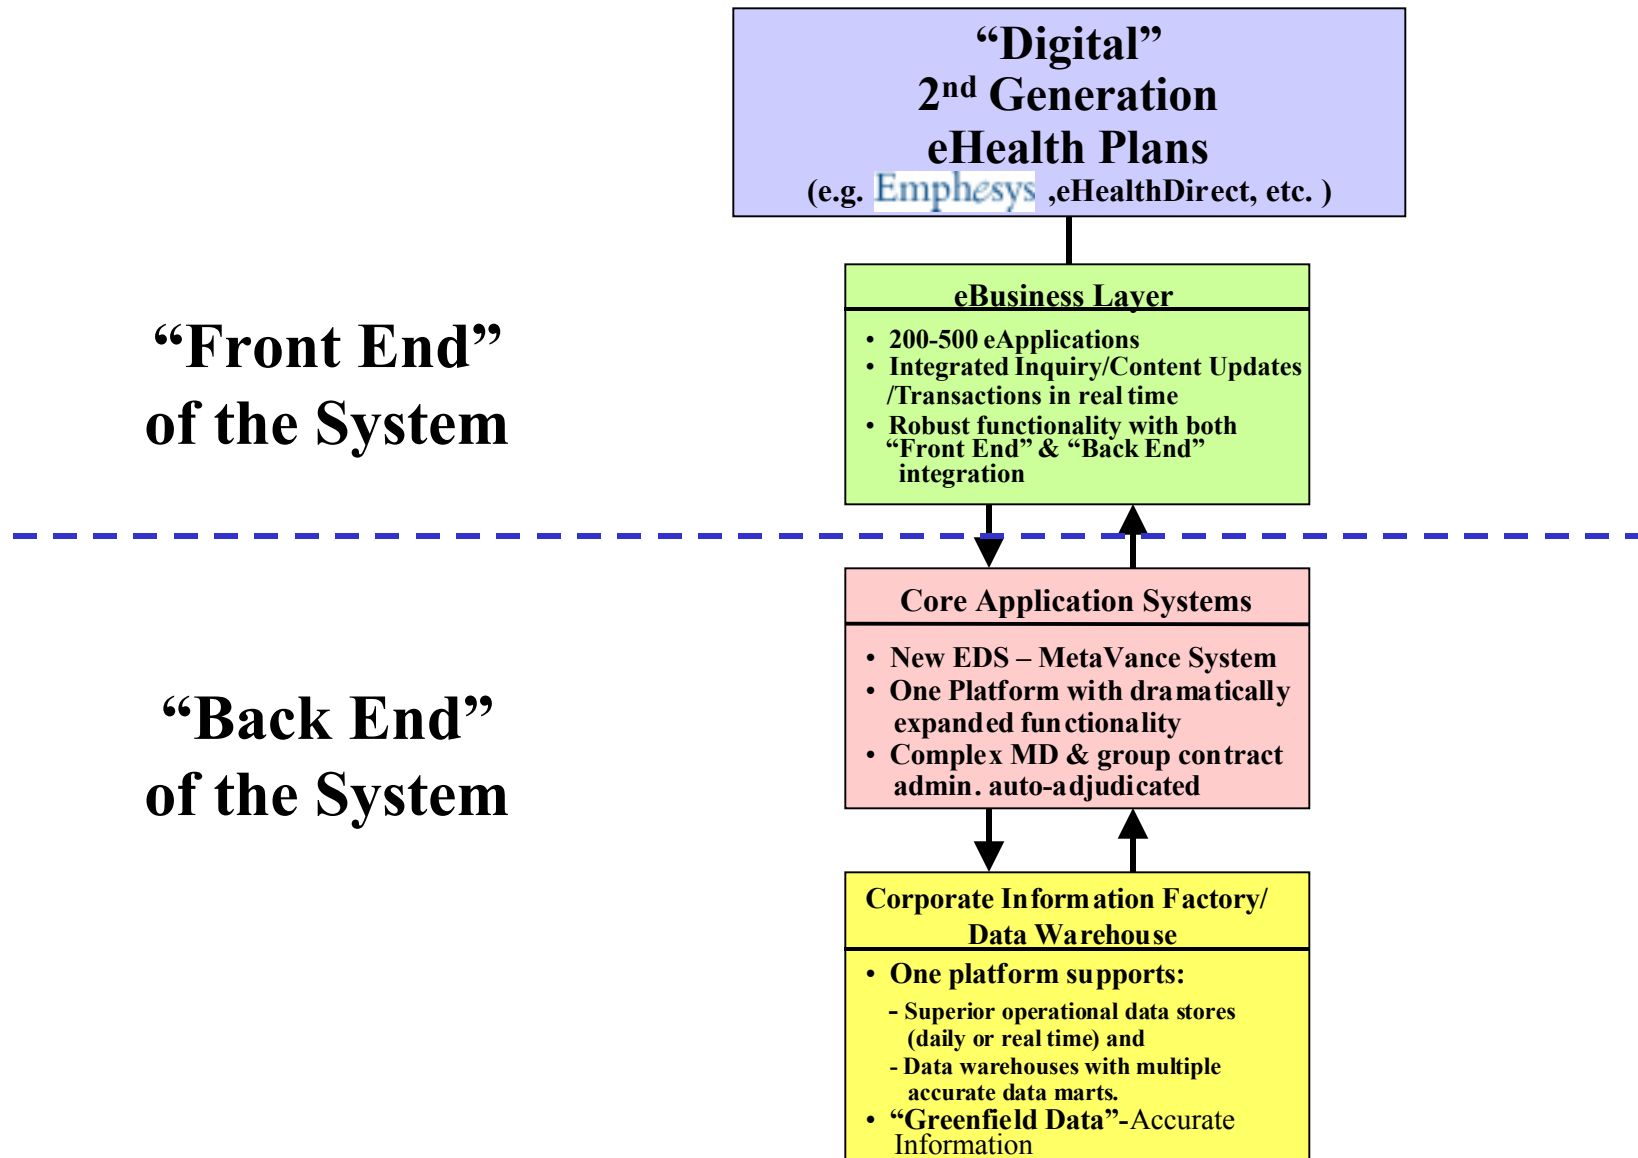

2nd Generation “Digital” eHealth Plans Examples Emphesys, eDirect Health, etc.

eHealthDirect

Emphesys

Digital Health Plan

2nd Generation “Digital” eHealth Plans Front & Back End Integration to Maximize Functionality

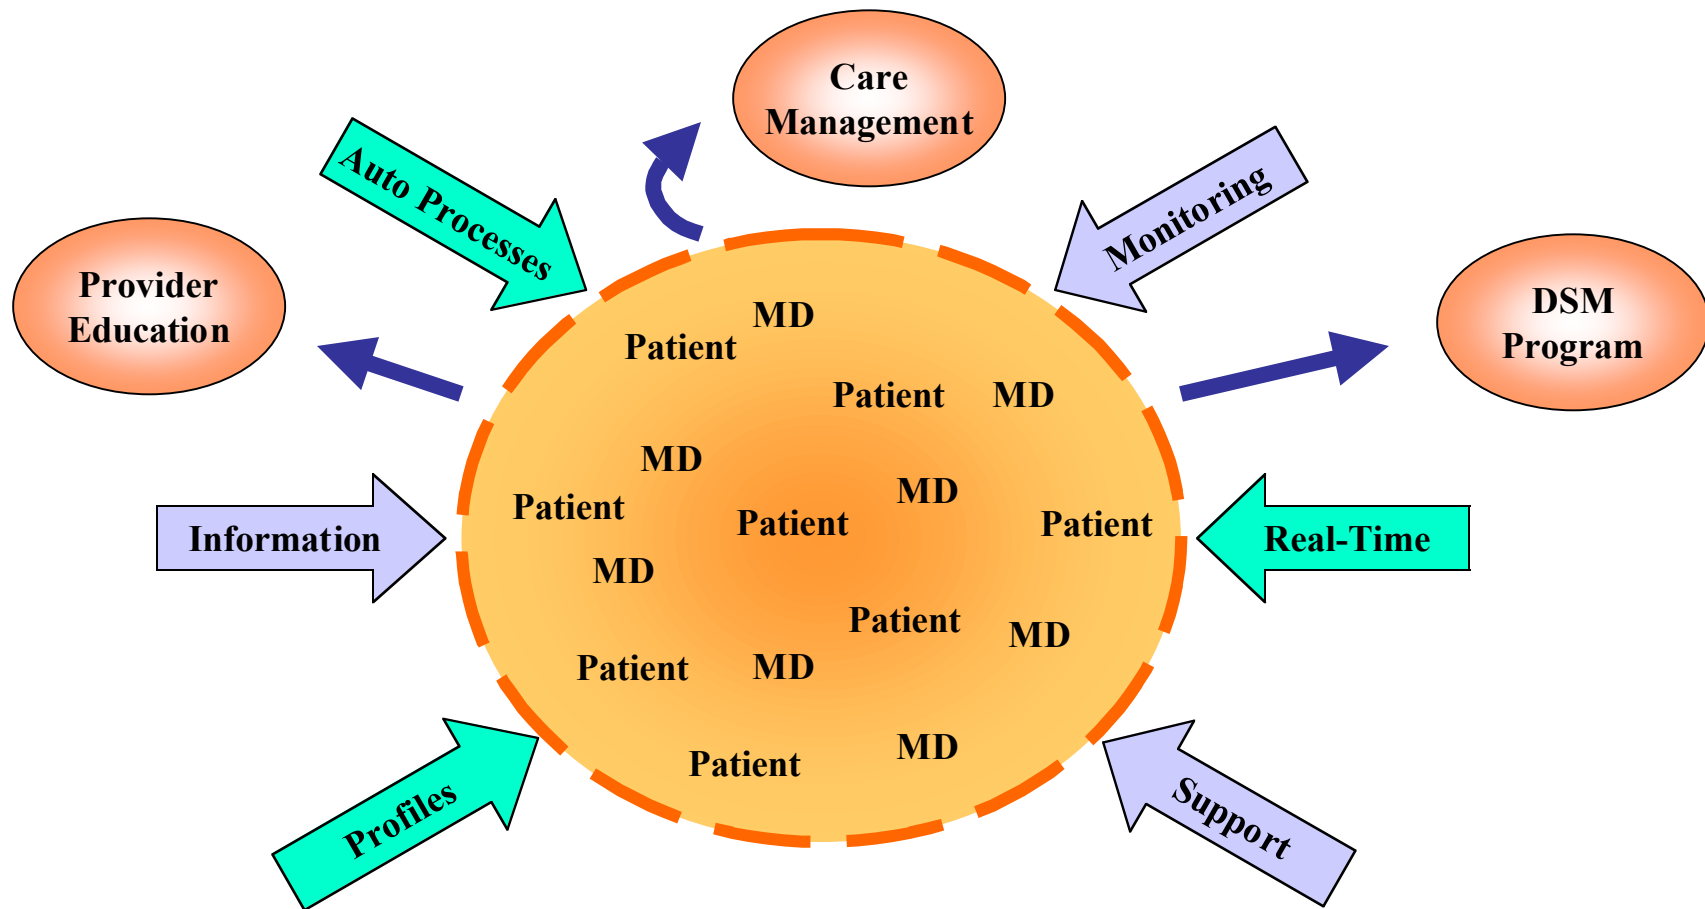

2nd Generation “Digital” eHealth Plans Difference to the Consumer/Member

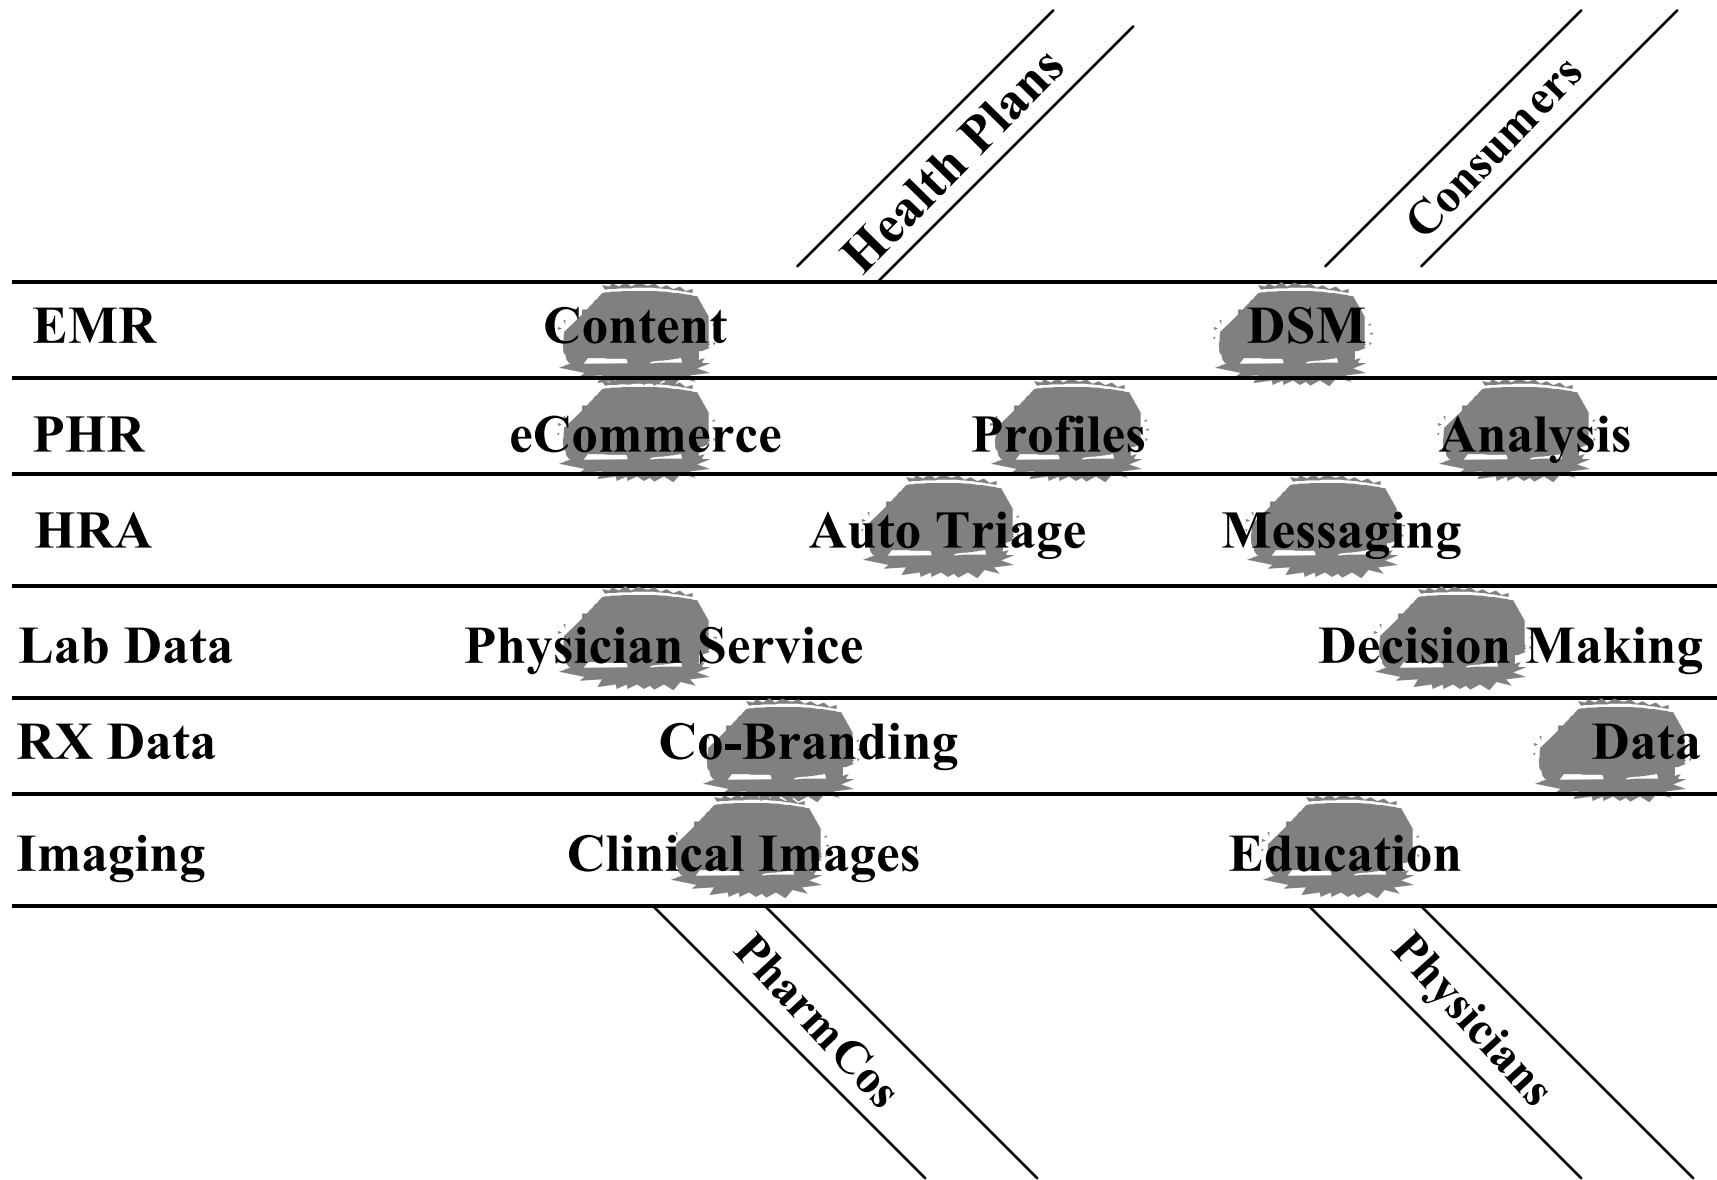

Function	Web-Enabled 1st Generation	Digital 2nd Generation
Benefit Design	Health plan provides PPO, HMO & POS options	Consumer creates individualized benefit plan by specifying key variables (i.e. co-pays, co-insurance, deductibles, ability to share risk, networks, quality improvement participation, etc.).
Networks	Plan creates network for different products	Plan creates one “transparent” universal network. The consumer individualizes their network & pays a different premium depending on choices.
Health Risk Appraisals	Plan and/or vendor surveys select populations. Results used for medical management interventions	Everyone surveyed after acceptance. Immediate individualized feedback helps consumer start medical history document/PHR and recommends next steps.
Fee Schedules	Plan negotiates compensation	Plan negotiates compensation and arms consumer with pricing information before they receive care-“Transparent Pricing”.

2nd Generation “Digital” eHealth Plans New “Consumer Centric Care” Models

“Consumer Centric Care” Vision: “MTO’s” - (Managing to Outcomes) - The Health Plan Provides Support to Providers and Members to Achieve Desired Outcomes and Implements Focused Programs for Outlier Performers.

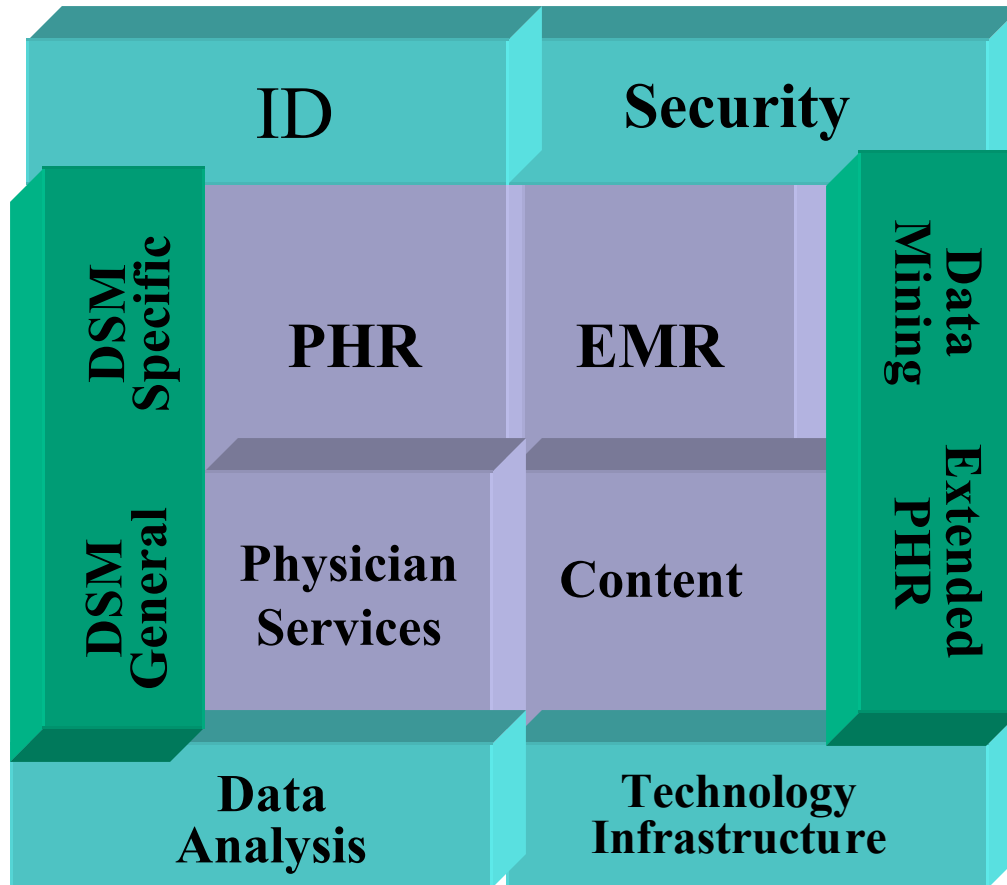

2nd Generation “Digital” eHealth Plan Optimally Connects To The Clinical Information Superhighway

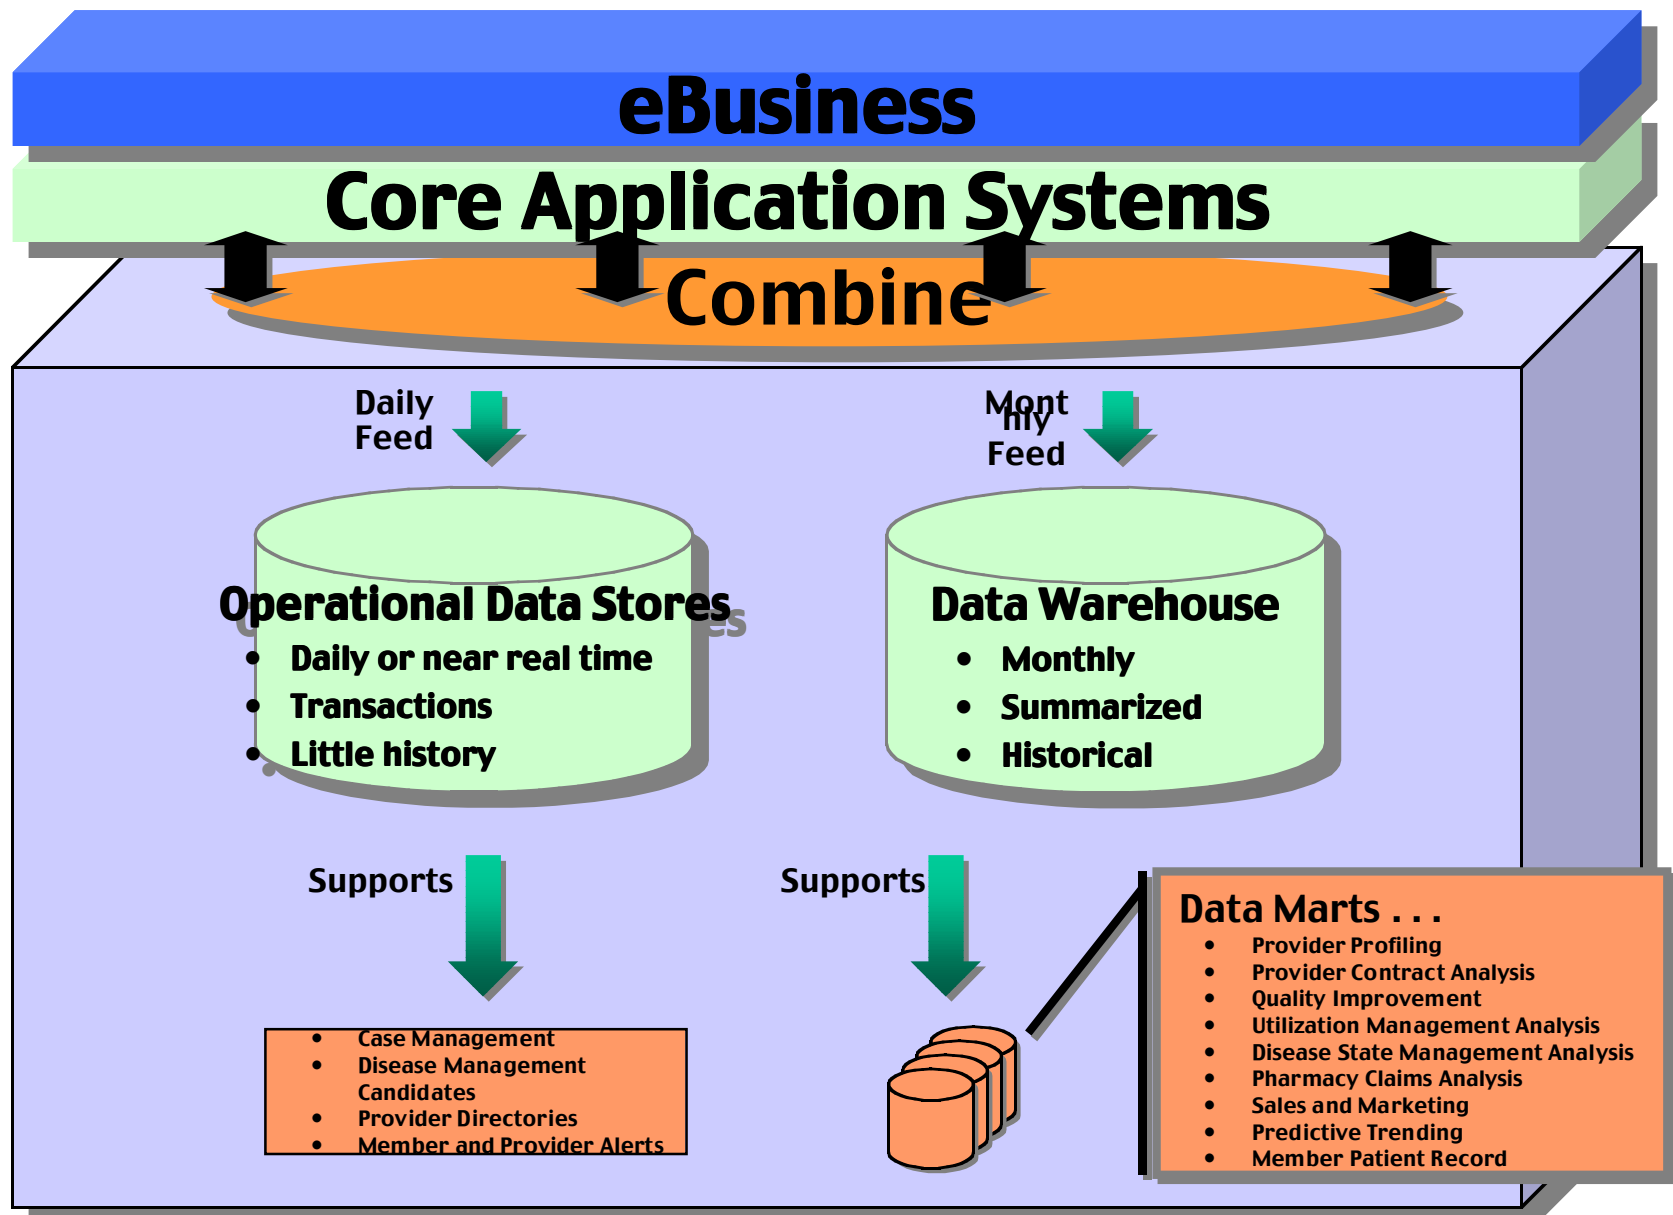

2nd Generation “Digital” eHealth Plans

Building Blocks for the Clinical Information Superhighway

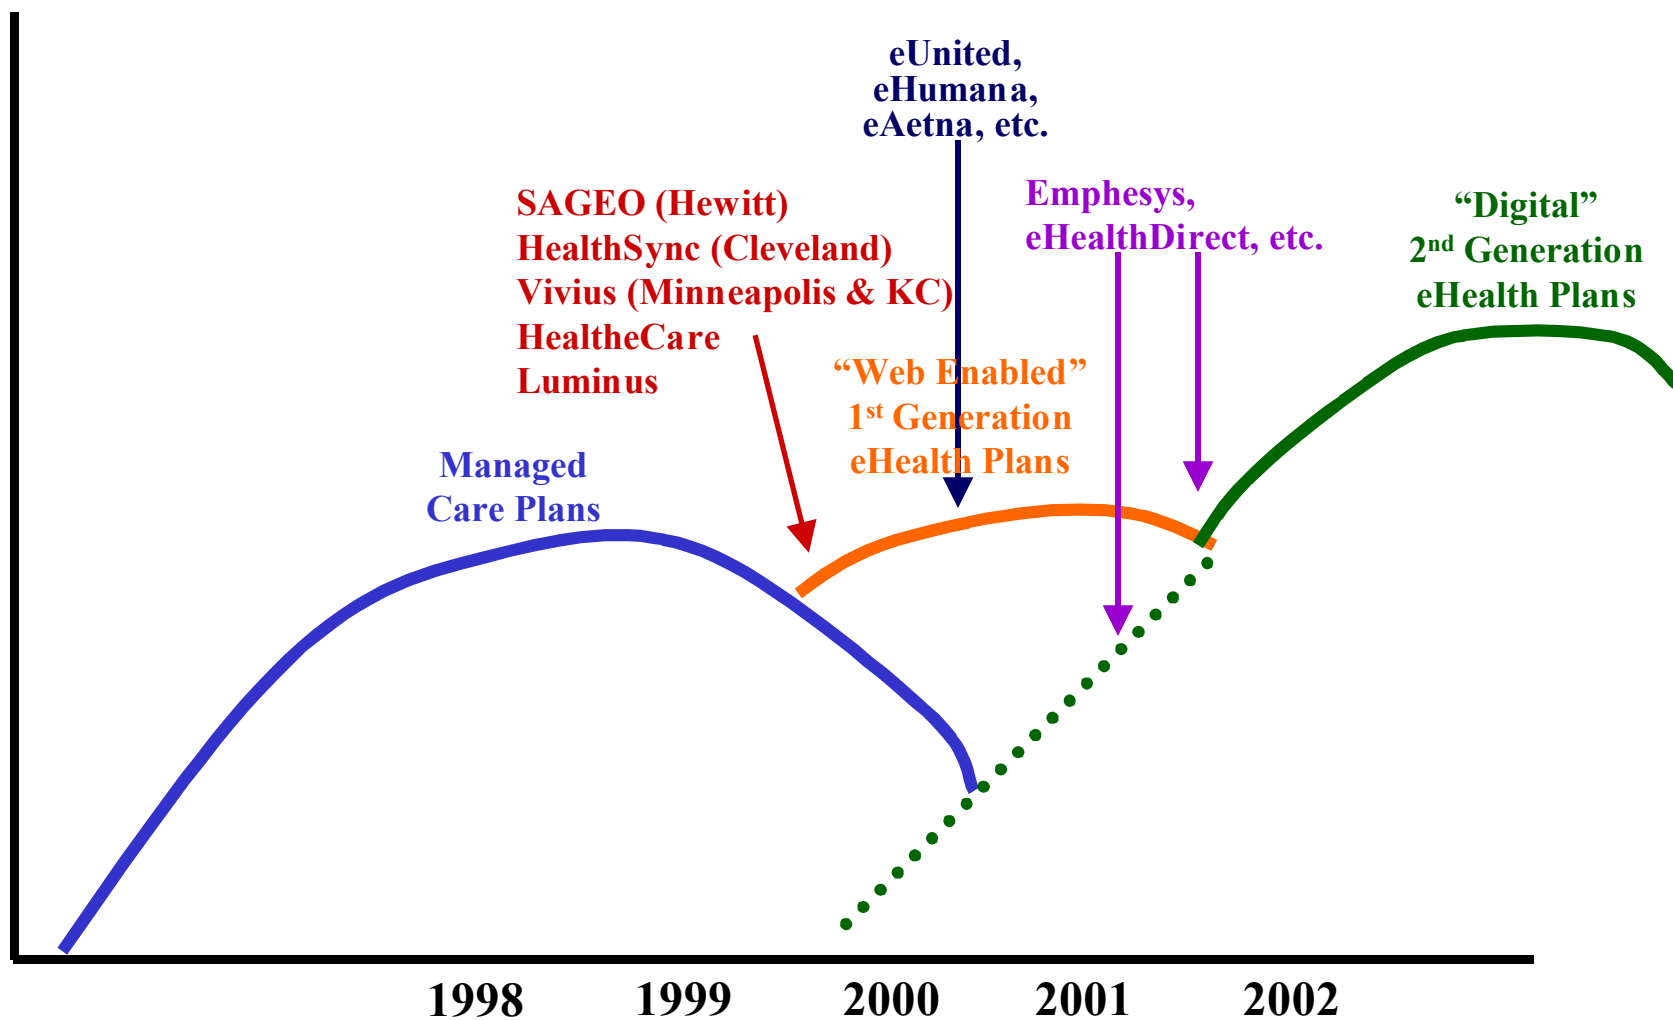

2nd Generation “Digital” eHealth Plans

Expanded Data Base Capability Supports Expanded Functionality

Conclusion: Evolving Types of eHealth Plans

Conclusion: Digital Health Plan Differences

2nd Generation “Digital” eHealth Plan Differences

Integration of “Front End” and “Back End” Functionality Enables:

- The Ability for Employers To Create Employee Self Service (eHR) Specifications, Including “Virtual” Defined Contribution Plans;**
- Greater Reduction Administrative Costs and Hassles; and**
- Improved Quality & Greater Reduction of Medical Costs with “Consumer Centric Care”**
